# 1. PROJECT OVERVIEW

Tyou is an application developed for android in order to bring people closer to health professionals. Thus, we will have the hiring of professionals, such as nurses and caregivers, at the tip of the finger.

The company was created with the need to give possibilities and make people's lives easier. So, a platform focused on health was developed, So the app will be built for android phones as operating system. The team will consist of 6 people, where they will have the division of work, either to work in the design, as in the back-end. The Scrum methodology will be followed by the development team to deliver this application, and the project completion time is about 15 weeks.

## 1.1. Project scope

The project has the following functions: setup, "safe" button, reports and evaluation. In the reports part will be evaluated the project performance, using graphs to represent how it is being done, what needs to change and etc. In the evaluation, we will have feedback from the customer, to evaluate both the application and the service provided. In the "safe" button, a mechanism will be used where the user will have to declare that it is ok, so we will have to create some means for such declaration. Whether with facial recognition, or even biometrics. and in the configuration will be made the registration of users, both the person who will be cared for, as the caregiver.

## 1.2. Major software functions

The online peer evaluation system will be divided into three parts:

- Setup
- "Safe" button
- Evaluation
- Reports

### 1.2.1 Setup

The setup will consist of sending documents and hiring services.

### 1.2.2 “Safe button”

The safe button will require the use of some technology to be able to "prove" that the person is ok. Thus, sending a message to your security contacts.

### 1.2.3 Evaluation

For an evaluation it will be necessary to create a ranking, where it can be used as an evaluation method to choose the person to treat the patient.

### 1.2.4 Reports

The reports will be used by programmers to receive application data as both issues and user feedback. In addition to reports created by the contributors themselves, to quote changes in the application and etc.

## 1.3. Deliverables

|   |
|---|
| <b>Sprint 1</b><br><br>(1 <sup>rd</sup> week)   |
| <ul style="list-style-type: none"><li>• Prototype</li><li>• Website cration</li><li>• Documentation</li></ul> |
